*Floppy disk drive system.  
Features two 315KB disk drives  
and 64K memory.*

# The Top Performers

## CompuCorp's 700 Series Information Processors

**Model 775**  
*Floppy disk drive system.  
 Features two 655KB disk drives  
 and 64K memory.*

**Model 785**  
*Winchester based system with  
 one 5MB Winchester Disk Drive  
 and one 655KB floppy drive.*

Meet the top performers. Compucorp's 700 Series. They're easily the most advanced information processors in their class.

The 700 Series provides all the features of Compucorp's world-famous 600 Series which was rated ***Number One in the 1981 and 1982 Datapro Survey*** of word processor users. But the 700 Series has even greater capabilities. Processing speed has been increased by an amazing 50%. The new video display accommodates

20% more information. And it comes in several full and half page versions. There are high capacity disk drives which require less diskette changing. And more programmable function keys, allowing more functions with a single keystroke.

A variety of ergonomic features have been added to the 700 Series. A sculptured typewriter keyboard that better fits rapid finger movement. A keyboard layout that's the same as a standard electric typewriter. An expanded numeric pad

**Model 790**  
*Winchester based system with  
one 10MB Winchester Disk Drive  
and one 655KB floppy drive.*

**Model 795**  
*Winchester based system with  
one 15MB Winchester Disk Drive  
and one 655KB floppy drive.*

for faster entry and greater accuracy. A video display that tilts and rotates for best operator viewing. Traditional with Compucorp, the separate keyboard can be moved almost anywhere on the desk.

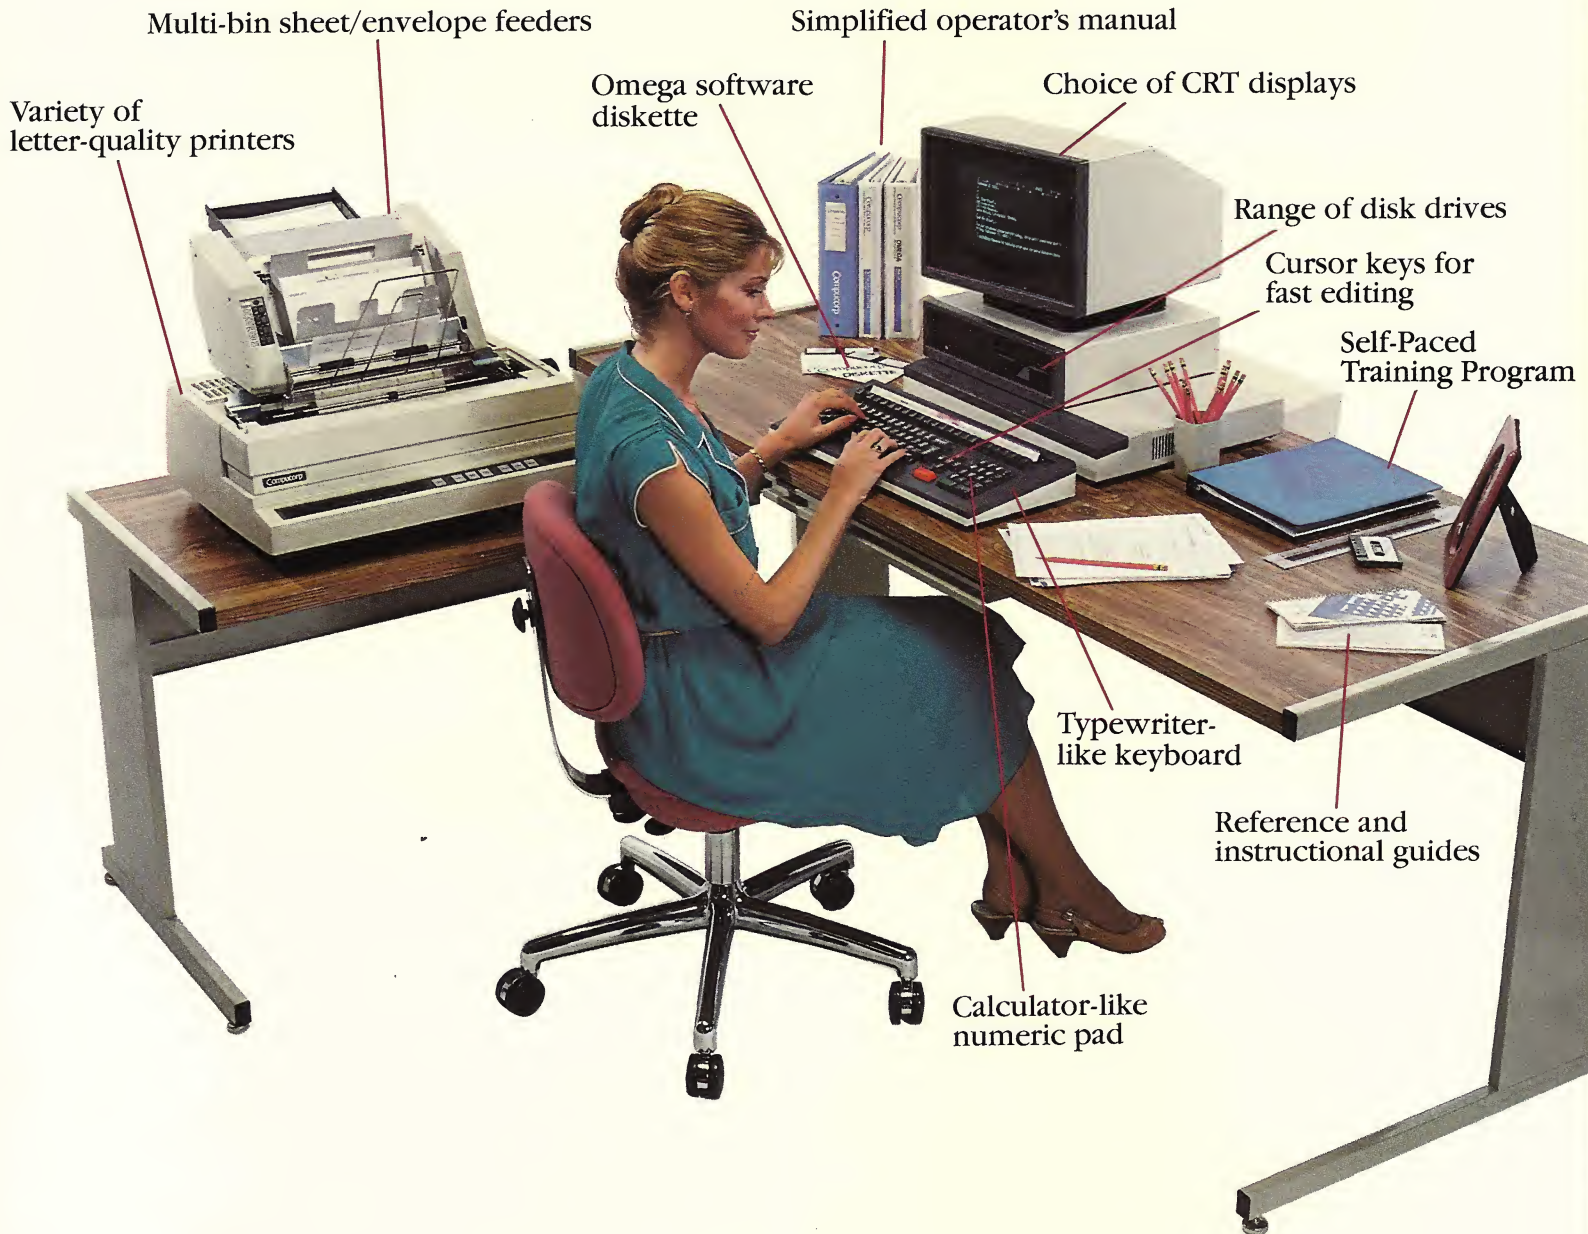

Like all Compucorp information processors, the 700 Series utilizes a modular design approach. This means that, when your needs change, your equipment can be easily upgraded. Memory can be expanded to 256K. Upgrading equipment, rather than purchasing new equipment, can

save a lot of money. And all Compucorp information processors can operate either as stand alone machines or as part of OmegaNet – Compucorp's local area network.

Compucorp offers comprehensive software packages. And all Compucorp 700 Series models operate with the CP/M® operating system which makes available a myriad of business, legal, and text editing applications.

# A Complete Line Of Compucorp Products For Every Work Station Need

**In 1981 and 1982 Compucorp Omega word processors were ranked Number One in the Datapro Survey of word processor users.**

# A Complete Line Of Compucorp Printers

Compucorp offers various letter-quality printers to meet the needs of the most demanding office... from low-speed to high-speed production... from inexpensive to complete paper handling systems.

## Compucorp Support

Compucorp has manufactured hundreds of thousands of computer-based products during its fourteen year history. Compucorp customers are supported worldwide in over 35 countries through an ever-growing family of branch sales offices, dealers and distributors. At Compucorp, we view after-

the-sale service as the most important ingredient in customer satisfaction. A Marketing Support Group provides training, installation and follow-up care for customers. A National Parts Center supplies fast parts backup. Trained service technicians provide field support when needed.
